A COOLED RADIOFREQUENCY (RF) TREATMENT FOR CHRONIC SHOULDER PAIN

Shoulder pain is the third most common cause of musculoskeletal consultation in primary care. Self-reported prevalence of shoulder pain is estimated to be up to 26% in adults. A condition often stemming from multiple factors and underlying pathology, shoulder pain can occur at any age and be aggravated by many common daily activities including manual labor, physical activity, and general repetitive movement.

Struggling with recurring, chronic shoulder pain can leave patients frustrated and seeking relief. Today, physicians that treat these patients with persistent chronic shoulder pain have limited treatment options outside of invasive surgical procedures and many of these treatment-seeking patients may be unwilling or are not candidates for surgery.

COOLIEF* Cooled Radiofrequency (RF) is a minimally invasive treatment option that allows physicians to provide patients another option before invasive surgery to help get their patients back to the things that matter.

COOLIEF* SHOULDER COOLED RADIOFREQUENCY
Fortunately, the same revolutionary COOLIEF* Cooled RF Pain Management System with documented pain relief in segments of the spine, knee and hip is now available to target chronic pain in the shoulder.
COOLIEF® SHOULDER
Cooled Radiofrequency

COOLIEF® COOLED RADIOFREQUENCY

• Clinical studies of COOLIEF® Cooled RF addressing other sources of pain have demonstrated up to 24 months of pain relief with improved physical function and a reduction in pain medication usage. 3,4
• Treats chronic shoulder pain through the creation of large volume, spherical lesions.
• Delivers RF energy through water-cooled electrodes which enables more RF energy to be safely delivered to target nerves creating spherically-shaped lesions:
  - 5x larger volume than standard RF lesions
  - Distally projects 45% or greater beyond the probe tip
  - Enables angle independence of the probe placement

COOLIEF® Cooled RF Kits Specifically Designed for Shoulder Modality
